Experiment 2 – Hotel Room Booking System

Aim:

To develop an online Hotel Room Booking System for searching hotels, checking room availability, booking rooms, managing reservations, and handling administrative operations.

Algorithm:

1. Register and authenticate the user.
2. Search hotels using destination, dates, and number of guests.
3. Display available rooms with price, amenities, and reviews.
4. Check room availability and select the required room.
5. Enter booking details and complete payment.
6. Store and display booking history.
7. Allow modification or cancellation according to the specified rules.
8. Allow admin to manage rooms, prices, bookings, users, and website information.

Code:

```
<!DOCTYPE html>
<html>
<head>
  <title>Hotel Booking System</title>
  <style>
    body {
      font-family: Arial;
      margin: 0;
      background: #f2f2f2;
```

```
}

header {
    background: #263238;
    color: white;
    padding: 20px;
    text-align: center;
}

nav {
    background: #37474f;
    padding: 12px;
    text-align: center;
}

nav a {
    color: white;
    margin: 15px;
    text-decoration: none;
}

.box {
    background: white;
    width: 80%;
    margin: 20px auto;
    padding: 20px;
```

```
            border-radius: 10px;
        }

        input, select, textarea, button {
            padding: 10px;
            margin: 7px;
        }

        button {
            background: #263238;
            color: white;
            border: none;
            cursor: pointer;
        }

        .room {
            border: 1px solid #ccc;
            padding: 15px;
            margin: 10px;
        }
    </style>
</head>

<body>

<header>
```

```
    <h1>Grand Palace Hotel</h1>
    <p>Online Hotel Room Booking System</p>
</header>

<nav>
    <a href="#home">Home</a>
    <a href="#rooms">Rooms</a>
    <a href="#booking">Booking</a>
    <a href="#history">My Bookings</a>
    <a href="#about">About</a>
    <a href="#contact">Contact</a>
</nav>

<div class="box" id="home">
    <h2>Search Hotel</h2>

    <input type="text" placeholder="Destination">

    <input type="date">

    <input type="date">

    <input type="number" placeholder="Guests" min="1">

    <button onclick="alert('Searching available rooms...')">
        Search
```

```
    </button>
</div>

<div class="box" id="rooms">
    <h2>Available Rooms</h2>

    <div class="room">
        <h3>Single Room</h3>
        <p>Price: ₹1500 / night</p>
        <p>WiFi | AC | TV</p>
        <button onclick="book('Single Room',1500)">
            Book Now
        </button>
    </div>

    <div class="room">
        <h3>Double Room</h3>
        <p>Price: ₹2500 / night</p>
        <p>WiFi | AC | TV | Breakfast</p>
        <button onclick="book('Double Room',2500)">
            Book Now
        </button>
    </div>

    <div class="room">
        <h3>Deluxe Room</h3>
```

```
      <p>Price: ₹3500 / night</p>
      <p>WiFi | AC | TV | Mini Bar</p>
      <button onclick="book('Deluxe Room',3500)">
        Book Now
      </button>
    </div>

    <div class="room">
      <h3>Suite Room</h3>
      <p>Price: ₹5000 / night</p>
      <p>WiFi | AC | TV | Living Room</p>
      <button onclick="book('Suite Room',5000)">
        Book Now
      </button>
    </div>
  </div>

  <div class="box" id="booking">
    <h2>Book Your Room</h2>

    <form onsubmit="confirmBooking(); return false;">

      <input type="text" id="name"
          placeholder="Full Name" required><br>

      <input type="email"
```

```
        placeholder="Email" required><br>

    <input type="tel"
        placeholder="Phone Number" required><br>

    <select id="room" required>
      <option value="">Select Room</option>
      <option>Single Room</option>
```

Output:

Result:

The Hotel Room Booking System was successfully developed with room search, availability checking, booking, payment, booking management, and administrator functions.
