Experiment 6 – Online Cake Ordering System

Aim:
To develop an online Cake Ordering System for browsing cakes, customizing orders, placing orders, making payments, and tracking delivery.

Algorithm:

1. Register and log in the user.
2. Display cakes based on category, flavour, and occasion.
3. Search and filter cakes by category and price.
4. Select a cake and view its details.
5. Add the required cake to the cart.
6. Enter or update the shipping address.
7. Place the order and complete payment.
8. Display order and shipping status.
9. Allow admin to manage products, orders, images, and shipping details.

Code:

```
<!DOCTYPE html>
<html>
<head>
  <title>Online Cake Ordering</title>

  <style>
    body {
      font-family: Arial;
```

```
    margin: 0;
    background: #fff3f6;
}

header {
    background: #d81b60;
    color: white;
    text-align: center;
    padding: 20px;
}

.container {
    width: 90%;
    max-width: 900px;
    margin: 25px auto;
    background: white;
    padding: 25px;
    border-radius: 10px;
    box-shadow: 0 0 10px #bbb;
}

input, select, textarea, button {
    width: 100%;
    padding: 10px;
    margin: 7px 0;
    box-sizing: border-box;
```

```
}

button {
    background: #d81b60;
    color: white;
    border: none;
    border-radius: 5px;
    cursor: pointer;
}

button:hover {
    background: #ad1457;
}

.cakes {
    display: flex;
    gap: 15px;
    flex-wrap: wrap;
}

.cake {
    border: 1px solid #ddd;
    padding: 15px;
    width: 220px;
    border-radius: 8px;
    text-align: center;
```

```
        }

        .cake span {
            font-size: 50px;
        }

        .order {
            background: #fce4ec;
            padding: 15px;
            margin-top: 20px;
            border-radius: 8px;
        }
    </style>
</head>

<body>

<header>
    <h1>🎂 Online Cake Ordering</h1>
</header>

<div class="container">

    <h2>Search Cake</h2>

    <input type="text" id="search"
