Experiment 19: VetCure – Online Veterinary Consultation System

Aim:

To develop an online veterinary consultation website where farmers can submit animal symptoms through text and attach media, consult doctors, make subscription payments, and access veterinary information. Doctors can review complaints, provide solutions, manage animal cures and news, and view user and payment details.

Algorithm:

1. Design a responsive interface for farmers/users and veterinary doctors.
2. Provide registration and login forms for users and doctors.
3. Allow farmers to submit animal symptoms as text and select image, audio, or video attachments.
4. Display submitted complaints on the doctor dashboard, allowing doctors to respond with solutions and manage cure information.
5. Provide subscription options for government veterinary services and private clinics, with a simulated payment interface.
6. Store consultation records and display complaint status, veterinary news, doctor details, feedback, and payment information.
7. Display sample animal-disease information and basic reports showing disease trends by area.

Output:

Result

Thus, the VetCure veterinary consultation system was implemented with user registration, animal symptom reporting, doctor responses, subscription-payment simulation, veterinary information management, and consultation tracking.
