Experiment 21 — JobConnect: Online Job Vacancy and Recruitment System

Aim:

To develop an interactive online recruitment platform where applicants can register, search and filter vacancies, save jobs, and apply online; directors can post vacancies and manage applicants; and administrators can approve directors and monitor recruitment activities.

Algorithm:

1. Start the application and display job vacancies with company images, search, and filtering options.
2. Allow applicants to create a profile, search jobs by title, location, category, and employment type, save vacancies, and apply.
3. Generate an application ID and display the current application status.
4. Allow directors to register, await approval, post vacancies, and review applicants.
5. Allow the administrator to approve directors, view registered users and vacancies, and monitor recruitment activity.
6. Store demonstration data in browser storage and refresh dashboard statistics when data changes.
7. Display application status updates and allow administrators to export recruitment reports.
8. Stop the application.

Code:
