Experiment 24: Wanderlust Travels — Online Travel and Tourism Booking System

Aim:

To develop an interactive travel and tourism website that allows users to explore tourist destinations, view food and accommodation details, check travel routes, and book accommodation. Administrators can manage tourism, food, hotel, and route information and view booking details.

Algorithm:

1. Start the website and display the home page with popular tourist destinations.
2. Allow users to register and log in to the system.
3. Display tourism, food, hostel, hotel, and route information.
4. Allow users to search destinations and view their details.
5. Enable users to select accommodation and submit a booking.
6. Store booking details and display booking confirmation.
7. Allow the administrator to log in and manage tourism, food, hotel, and route information.
8. Display booking records to the administrator and end the session.

Code:

Save as wanderlust.html and open it in Chrome. This single-file version includes destination cards with images, search and category filters, accommodation booking, booking history, and an admin dashboard. It uses browser storage for this lab demonstration.

Output:

Result:

Thus, the Wanderlust Travels website was developed using HTML, CSS, and JavaScript. It demonstrates tourism information management, destination searching, accommodation booking, booking history, and administrative operations.
